WORK EXPERIENCE

Theori (Cyber Security Startup) Seoul, Korea
Freelance Research Engineer Feb. 2025 – Aug. 2025
AIxCC (AI Cyber Challenge) finalist with Team Theori (3rd place).
Implemented *Branch Flipper*, an LLM-agentic system for breaking fuzz blockers.

Senior Research Engineer (Full-time; part-time Mar. 2024 – Jun. 2024) Aug. 2023 – Feb. 2025
Developed an LLM-based automatic threat generation and exploitability validation system.
Built an LLM-powered security audit report assistant.
Architected and deployed an on-premise LLM server with automatic scale-to-zero.

Team Lead Aug. 2023 – Oct. 2024
Founded and led the AI for Offensive Security team.
Responsible for hiring, team operations, and project management.

Lionrocket (Generative AI Tech Startup) Seoul, Korea
Full-time Research Engineer Sep. 2019 – Jul. 2023
Developed a reference-based automatic image colorization system for web comics production.
Built a reference-based voice cloning system for automatic audiobook generation.
Implemented a CUDA-based RNN accelerator.
Developed a production-level text-to-speech synthesis model.

Team Lead Sep. 2019 – Jul. 2023
Founded and led the Research team.
Responsible for hiring, team operations, and project management.

EDUCATION

Seoul National University, Seoul, Korea Mar. 2025 – Feb. 2027
M.S. in Computer Science and Engineering / Advisor: Prof. Jaesik Park
Research Interests: Generative Models, Diffusion Models (GPA: 3.94 / 4.3)

Hanyang University, Seoul, Korea Mar. 2018 – Feb. 2025
B.S. in Computer Science and Engineering, Minor in Mathematics
GPA: 4.0 / 4.5 (Major GPA: 4.2 / 4.5)

PUBLICATIONS

Distribution Matching Distillation without Fake Score Network NeurIPS, 2026
Youngjoong Kim, Deokyeong Lee, and Jaesik Park (arXiv:2605.19256)
Proposed efficient, effective DMD-style training method without a fake score network for flow-map generators.

Stabilizing Consistency Training: A Flow Map Analysis and Self-Distillation TMLR, 2026
Youngjoong Kim, Duhoe Kim, Woosung Kim, and Jaesik Park (arXiv:2601.22679)
Systematically analyzed training instability in consistency models and stabilized training with improved reproducibility.

Compositional Diffusion Planning with Chunk Selection and Reachability Measure Under review
Chanyoung Park, Youngjoong Kim, and Jaesik Park
Proposed a diffusion-based planning method for composing local robot trajectories into a feasible full plan.

AWARDS AND HONORS

3rd Place DARPA AIxCC (AI Cyber Challenge), 2025
Defense Advanced Research Projects Agency (DARPA), U.S.
Developed an LLM-based agentic system for automatic vulnerability discovery.

2nd Prize (Application Security Section) KISA Software Contest, 2016
Korea Internet & Security Agency (KISA), Korea.
Security auditing of Java-based mobile applications and vulnerability reporting.

SKILLS

- **Programming:** Python, C/C++, Rust
- **Deep Learning:** PyTorch, TensorFlow, JAX/Flax, CUDA
- **Cybersecurity:** Reverse Engineering, Greybox Fuzzing, Secure Coding
- **Languages:** Korean (native), English (OPIc IH / Aug 21, 2026)

Open-Source Contributions (GitHub)

sgl-project/sglang Apr. 2024
: High-performance serving framework for large language models and multimodal models.
PR#411, Added support for the Cohere Command-R chat template.

SqueezeBits/QUICK Feb. 2024
: Quantization-aware Interleaving and Conflict-free Kernel for efficient LLM inference.
PR#3, Excluded router projection layers of Mixtral 8x7B from QUICK quantization.

casper-hansen/AutoAWQ Dec. 2023
: AutoAWQ implements the AWQ algorithm for 4-bit quantization with a 2x speedup during inference.
PR#251, Added support for Mixtral 8x7B Activation-Aware Quantization.

utilForever/RosettaStone Aug. 2017 - Apr. 2019
: Hearthstone simulator using C++ with some reinforcement learning.
PRs, Initialized the project and implemented the basic simulation system with a policy interface.

Related Projects (GitHub)

SNU-VGILab/improvedSelfDistillation Jun. 2026
: Official implementation of iSD (improved Self-Distillation).
(Stabilizing Consistency Training: A Flow Map Analysis and Self-Distillation, Kim et al., TMLR 2026.)

theori-io/aixcc-afc-archive Aug. 2025
: Public source-code release of Theori's AIxCC AFC submission.
Implemented the Kaitai Struct-based binary decoder and Branch Flipper agents.

revsic/flowmodels Feb. 2025
: PyTorch implementations of +17 flow models for toy data.

revsic/agent-fuzz Sep. 2024
: Python implementation of LLM agent-based fuzz-driver generation (a graduate project).

revsic/torch-nansypp (+150 stars) Dec. 2022
: PyTorch implementation of NANSY++
, Unified Voice Synthesis with Neural Analysis and Synthesis (Choi et al., ICLR 2023).

revsic/torch-nansy (+50 stars) Sep. 2022
: PyTorch implementation of NANSY, Neural Analysis and Synthesis (Choi et al., NeurIPS 2021).

revsic/AntiDebugging (+300 stars) Oct. 2016
: Sample anti-debugging source code written in C++.

revsic/cpp-obfuscator (+150 stars) Feb. 2019
: C++ implementation of a compile-time obfuscator.
